

The National Broadcaster's Association petition 04-160 should be immediately rejected by the FCC. As I understand it, this petition seeks to limit the ability of XM Satellite Radio to include instant traffic and weather information. THIS IS CRAZY. Initially I became an XM subscriber because I travel on remote roads in Colorado and have a mountain home which receives NO RADIO OTHER THAN XM. Thus FCC's approval of the NAB petition would eliminate my access to such important information. I also listen to XM because their programming is superior to other available programming. I pay for this service as do other subscribers and to have "free" radio services argue to limit my right to pay for this service is NUTS! FCC should definitely DENY the NAB's petition.
Thank you.
